GP3 Bloom Base Nutrient Liquid Fertilizer

GP3 Bloom is an essential component of our 3-part base nutrient system and provides your plants with the optimal array of nutrients they need for the bloom stage. GP3 Bloom is part of the GP3 Feed Program.

Base Nutrient

Liquid Fertilizer

Flowering Stage

HOW IT WORKS

GP3 Bloom is the component of the GP3 nutrient system that provides your plants with the right nutrients they need in the flowering stage of growth. This stage is when your plants start to fruit and produce flowers up until it is time for harvest. But in order to maximize their yields, they need the right formula. The Bloom formula contains no synthetic dyes and contains only ethically sourced ingredients to ensure your plants are getting the highest quality nutrients possible. These include high amounts of phosphorous (P) and potassium (K), which plants require to thrive while flowering. Phosphorous is vital for essential plant functions and flower formation to deliver larger yields. Potassium helps convert phosphorous into energy your plant can use and strengthens cell walls to support heavy flowers. When used alongside GP3 Micro and GP3 Grow, your plants will receive the primary, secondary, micro, and macronutrients they need for a bountiful harvest.

HOW TO USE IT

GP3 requires Grow, Micro, and Bloom for the best results. Refer to the GP3 Feed Program for application rates during each stage of plant growth. Mix each product individually into the reservoir, check the PPM, pH and adjust accordingly.

CAUTION: Combining GP3 components together in an undiluted form may cause nutrient lockout. Always mix into the reservoir separately. Follow the GP3 Feed Program for the best results.

Product Benefits:

Contains No Dyes or Synthetic Colours

Unlike our competitors, GP3 contains only what your plants need to thrive.

Increased Flexibility and Control

Allows for more control over the levels of nutrients your plants receive than a traditional 2 part system.

Low Salt Index

GP3 is a super clean product: each part of the system goes through a rigorous filtration process during production to leave absolutely no sediment or residue in your reservoir once mixed.

100% Chelated Micronutrients

All the micronutrients in GP3 are 100% chelated, so you can be sure your plants will get the micronutrients they need to thrive.

Seamlessly Integratable

Each part of the GP3 program can be seamlessly integrated into any 3 part feeding program.
